

Press Release – Krypto SMS

Date: March 17<sup>th</sup> 2014

It is the pleasure of mTouche Technology Bhd & group to announce the launch of Krypto SMS, an android based SMS communication App that works by encrypting text messages via the AES 256-bit algorithm on the phone to be sent securely to other Krypto SMS users. The app also has a timed auto-delete message feature, an app-stealth feature, and a private contact list & notepad. The app was designed in-house.

The core focus of this app is to provide individuals or organisations the ability to securely communicate with desired parties as privately as possible, protecting the right to privacy of users and to consistently provide security in an age of un-authorized SMS collection and processing. We will fervently protect these rights as best we can via our technology.

Currently, Krypto SMS is offered to Android based devices, and is usable as a subscription based service. Currently, we have 4 subscription packages (Listed below):

- 3 Months – RM30
- 6 Months – RM55
- 12 Months – RM100
- Lifetime – RM500

mTouche Technology Bhd plans to further expand our app catalogue by providing encrypted chat, featuring group chat and file-transfer functionality and encrypted e-mail, in the near future. Announcements for development will be released at a later date.
